

Symbols of stimuli / instruments sensitive to them perceived by eleven senses.

eleven senses

designing instruments of presence

How different is representation of space from full-body experience of place?

Our era faces the challenge of integrating the global paradigm of virtual reality with presence, that indivisible, multi-sensorial happening that defines *the real*. Presence is under analysis.

eleven senses is a laboratory that explores the DESIGN of instruments (mechanisms, strategies, objects) that are particularly sensitive to stimuli of the outside world. Our objective is to intensify presence by selecting, enhancing, framing, or making specific phenomena apparent with the tools of design. Meaningful artifacts tune the world to our senses.
